

2	<p><b>D is the correct answer</b> (Polarised waves have oscillations in one direction and perpendicular to the direction of wave travel)</p> <p>A is not the correct answer as the single plane of polarisation includes the direction of wave travel and is not perpendicular to it</p> <p>B is not the correct answer as polarised waves do not contain many plames</p> <p>C is not the correct answer as polarised waves do not contain many directions</p>	(1)
