

12 When an increasing force is applied to a steel cable it will eventually reach its elastic limit.

(a) State what is meant by the elastic limit.

(1)

(b) The elastic limit of a steel cable was reached when a force of $13.4 \times 10^6 \text{ N}$ was applied. The extension of the cable was 0.126 m.

length of cable = 6.00 m

cross-sectional area of cable = $9.60 \times 10^{-3} \text{ m}^2$

(i) Calculate the strain of the cable at its elastic limit.

(2)

Strain =

(ii) Calculate the stress in the cable at its elastic limit.

(2)

Stress =

(Total for Question 12 = 5 marks)
