

- 17 A mass m is held in equilibrium by strings attached to two clamp stands. The force meter records the force F in the upper string. The force in the horizontal string is P . The angle made by the upper string to the horizontal is θ , as shown.

- (a) The force meter allows force to be measured by means of Hooke's law.

The extension of the spring inside the force meter allows the stretching force to be read from a scale.

When the force applied to stretch the spring is 15 N the extension of the spring is 8.0 cm.

Show that the stiffness of the spring is about 2 N cm^{-1} .

(2)

(b) When m is equal to 0.55 kg, the value of P is 8.5 N.

Calculate the value of θ , and the extension of the spring in the force meter.

(6)

$\theta =$

Extension of the spring =

(Total for Question 17 = 8 marks)
