

Question Number	Answer	Mark														
4(a)	<ul style="list-style-type: none">Re-arranges equation $V_a = \frac{hc}{e} \frac{1}{\lambda} + \frac{W}{e}$ and compares to $y = mx + c$ (1)Identifies $gradient = \frac{hc}{e}$ (1)States that h, c and e are all constants (1)	3														
4(b)(i)	<ul style="list-style-type: none">Correct values calculated (1)Values correctly rounded to 3 sig. fig. (1) <p>Example</p> <table><tr><th>$\lambda / \times 10^{-7} \text{ m}$</th><th>$1/\lambda / \times 10^6 \text{ m}^{-1}$</th></tr><tr><td>6.60</td><td>1.52</td></tr><tr><td>6.12</td><td>1.63</td></tr><tr><td>5.92</td><td>1.69</td></tr><tr><td>5.85</td><td>1.71</td></tr><tr><td>5.30</td><td>1.89</td></tr><tr><td>4.70</td><td>2.13</td></tr></table>	$\lambda / \times 10^{-7} \text{ m}$	$1/\lambda / \times 10^6 \text{ m}^{-1}$	6.60	1.52	6.12	1.63	5.92	1.69	5.85	1.71	5.30	1.89	4.70	2.13	2
$\lambda / \times 10^{-7} \text{ m}$	$1/\lambda / \times 10^6 \text{ m}^{-1}$															
6.60	1.52															
6.12	1.63															
5.92	1.69															
5.85	1.71															
5.30	1.89															
4.70	2.13															
4(b)(ii)	<ul style="list-style-type: none">Labels axes with quantities and units (1)Sensible scales (1)Plotting – 2 points furthest from their line (1)Plotting – 2 points at the ends (1)Line of best fit (1) <p>Refer to Mark Scheme Notes – Section 5 for guidance on axis labels, suitable scales & checking accuracy of plots. An example of the graph can be seen on page 11.</p> <table><tr><th>V_a / V</th><th>$1/\lambda / \times 10^6 \text{ m}^{-1}$</th></tr><tr><td>1.82</td><td>1.52</td></tr><tr><td>1.97</td><td>1.63</td></tr><tr><td>2.02</td><td>1.69</td></tr><tr><td>2.07</td><td>1.71</td></tr><tr><td>2.31</td><td>1.89</td></tr><tr><td>2.58</td><td>2.13</td></tr></table>	V_a / V	$1/\lambda / \times 10^6 \text{ m}^{-1}$	1.82	1.52	1.97	1.63	2.02	1.69	2.07	1.71	2.31	1.89	2.58	2.13	5
V_a / V	$1/\lambda / \times 10^6 \text{ m}^{-1}$															
1.82	1.52															
1.97	1.63															
2.02	1.69															
2.07	1.71															
2.31	1.89															
2.58	2.13															
4(b)(iii)	<ul style="list-style-type: none">Calculates gradient using large triangle - at least half their line of best fit (1)Use of $gradient = hc/e$ (1)$h = 6.65 \times 10^{-34}$ to $6.85 \times 10^{-34} \text{ J s}$ (1) <p>Example calculation</p> <p>Gradient = $(2.55 - 1.80) \text{ V} / (2.10 - 1.60) \times 10^6 \text{ m}^{-1} = 1.25 \times 10^{-6} \text{ V m}$</p> <p>$h = 1.25 \times 10^{-6} \text{ V m} \times 1.60 \times 10^{-19} \text{ C} / 3.00 \times 10^8 \text{ m s}^{-1} = 6.67 \times 10^{-34} \text{ J s}$</p>	3														
4(b)(iv)	<ul style="list-style-type: none">Mathematical comparison between their value from (b)(iii) and $6.63 \times 10^{-34} \text{ J s}$ (1)Comparative statement consistent with MP1 (1) <p>MP2 is for a statement that is justified by their value for h. E.g. Difference between the values is $0.04 (\times 10^{-34})$ is very small compared to $6.63 (\times 10^{-34})$, so method is accurate. Or Percentage difference is 0.6%, which is small, so method is accurate.</p>	2														

4(c)	<ul style="list-style-type: none"> Manufacturer's wavelength would be shorter (than the wavelength of photons with least energy) Or Manufacturer's wavelength would be shorter (than the wavelength of photons emitted at V_a) (1) A lower λ would give a higher $1/\lambda$ Or the line would shift to the right, (1) <p>EITHER</p> <ul style="list-style-type: none"> Difference in wavelength would be small, so negligible shift in points (Accept shift would be the same for all points, so same gradient) (1) No change in the value of h obtained. (1) <p>OR</p> <ul style="list-style-type: none"> Points for longer λ would shift $1/\lambda$ values less, decreasing the gradient (1) Decreasing the value of h obtained. (1) 	4
